SUMMARY

Technical product builder and final-year Computer Science student (University of Delhi, 2027). Co-founded and ran tech at an XR startup (**6-person team, 3 on-time releases**), now shaping an accessibility dispatch product at **IGI Airport** for GMR and integration strategy for an AI business OS at Tap4Technologies.

EXPERIENCE

AI and Automation Intern | GMR Group — Smart Airport City, IGI Airport *Jun 2026 – Present*

Smart Buggy: on-demand buggy service for passengers with reduced mobility at Terminal 3

- **Turned airport operations into a 4-app product** (passenger kiosk, driver tablet, dispatch engine, admin portal) covering **109 gates and points** across 2 floors.
- Mapped the full ride lifecycle and **6 exception paths** (no-shows, driver refusals, walk-ups, cancellations, **15-min escalation to admin, 30-min expiry**) so no request is silently dropped.
- Shaped the **4-tier allocation logic** that pools passengers headed to the same pier (up to 5 seats) before using idle buggies, getting more riders per trip.
- De-risked a vendor's AR wayfinding project by building an **ARCore proof-of-concept** that validated the navigation flow before rollout.

Tools: *Kotlin, Node.js, MQTT, Supabase (Postgres), ARCore*

Software Engineering Intern | Tap4Technologies (Remote) *Sep 2026 – Present*

Carbon: AI business OS with CRM and Marketing modules for SMBs

- Ran **integration research on Salesforce and Mailchimp**, the two tools target SMBs already use, covering users, **6 core objects**, auth and rate limits.
- Mapped Carbon features to each tool's objects and **recommended an integration direction (import vs. sync vs. replace)** for the first integration bet.
- Scoped the first slice to **one object, one direction** (Mailchimp audiences → Carbon contacts) to prove the path quickly; documented in **3 pull requests**.

Founding Member & CTO | XRVisionLabs *Feb 2024 – Oct 2025*

- Translated client requirements into roadmaps and specs; delivered **2 client projects over 12 months with 3 releases, 100% on time**.
- Led a **6-person cross-functional team** (developers, designers, researchers) through planning, build and launch.
- Standardised development pipelines and documentation, **shortening onboarding for new clients**.

Data Management Head | Placement Cell, University of Delhi *Aug 2023 – Jul 2024*

- Ran the student and alumni databases behind placement and internship drives, coordinating between recruiters and candidates.

PROJECTS

- **TeleAttendance:** spotted a manual attendance process and replaced it with a Telegram bot + database, **removing 100% of manual data entry**.
- **TeleTwin:** framed tower maintenance as a **remote-monitoring problem**; built a live digital twin with computer vision so ops teams spot issues without site visits.
- **Combat-XR:** translated **real defence training workflows** into repeatable VR scenarios with AI-driven scenario management for on-demand practice.
- **AR Indoor Navigation:** chose **browser-based AR (WebXR)** over a native app to remove the install step for first-time visitors.

SKILLS

Product: Requirements & specs, user flows, edge-case mapping, prioritisation and scoping, stakeholder management, technical documentation

Technical: SQL, PostgreSQL, Python, Kotlin, Node.js, REST APIs, system design | **Tools:** Trello, GitHub

EDUCATION

B.Sc. (Hons.) Computer Science, University of Delhi — CGPA 7.72 *2023 – 2027*

Class XII (CBSE, PCM), N.K. Bagrodia Public School — 89.2% *2023*

ACHIEVEMENTS

- Guest Speaker at **AWE Nite Orlando** (international XR conference); Guest Lecturer on XR & AI at **Jindal University of Art and Architecture**.
