SUMMARY

Final-year Computer Science student (University of Delhi, 2027) building production software for a live airport dispatch system at GMR: **Kotlin / Jetpack Compose** Android apps working with a **Node.js** engine over **MQTT and REST**, backed by **PostgreSQL**. Former startup CTO with **3 releases shipped, all on time**; comfortable owning a feature from requirements to deployment.

EXPERIENCE

AI and Automation Intern | GMR Group — Smart Airport City, IGI Airport *Jun 2026 – Present*

- Building the **driver-tablet and passenger-kiosk Android apps (Kotlin, Jetpack Compose)** for Smart Buggy, a **4-app system** that dispatches buggies to passengers with reduced mobility across **109 gates and points** at Terminal 3.
- Tablet publishes **live indoor position, battery and seat data over MQTT every 1 s** and drives the trip state machine (offer → board → start → drop) through **10+ REST endpoints** on a Node.js/Express engine.
- Built a **15 s offer flow with a 12 s driver countdown**, auto-accept for pooled rides (up to 5 seats) and auto-decline when full.
- Kiosk polls the engine **every 5 s** for buggy and ETA, caches config for **offline use** and re-sends unacknowledged bookings so no request is lost; devices **check in every 8 s** for remote provisioning.
- Built an **ARCore proof-of-concept** that validated the airport's vendor-led AR wayfinding flow before rollout.

Software Engineering Intern | Tap4Technologies (Remote) *Sep 2026 – Present*

- Researched **Salesforce and Mailchimp** integrations for Carbon, an AI business OS for SMBs; documented **6 core objects**, OAuth scopes, API keys and rate limits across **3 pull requests**.
- Working on the first integration slice, **Mailchimp audiences → Carbon contacts**, handling expired tokens, rate limits and partial syncs.

Founding Member & CTO | XRVisionLabs *Feb 2024 – Oct 2025*

- Owned the full SDLC from architecture to deployment for **2 client projects over 12 months: 3 releases, 100% on time**.
- Led a **6-person team** of developers, designers and researchers; standardised pipelines and documentation to shorten client onboarding.

Game Developer | AltReality Labs *Jan 2024 – Aug 2025*

- Shipped **3 physics-based Unity simulations** (archery, bowling, road-crossing) to production with projectile and rigid-body physics and adaptive scoring.

Virtual Reality Development Intern | University of Delhi *Feb 2024 – May 2026*

- Built real-time processing and debugging pipelines for **Azure Kinect skeletal tracking at 30 fps**; automated full-body tracking setup.

PROJECTS

TeleAttendance — Automated Attendance System *— Node.js, Telegram Bot API, REST, SQL*

- End-to-end attendance pipeline with a Telegram bot interface, REST API and database; **removed 100% of manual data entry** with real-time logging and lookup.

TeleTwin — Telecom Digital Twin *— Python, PostgreSQL, real-time pipelines*

- Real-time digital twin of telecom tower assets, streaming live data into PostgreSQL for remote monitoring and predictive maintenance.

XRchitect — Multiplayer VR Interior Design *— Meta XR SDK, Photon*

- Multiplayer app with networked state sync so several users edit the same room in real time.

SKILLS

Languages: Kotlin, JavaScript, Python, C#, C++, SQL

Mobile & Backend: Android (Jetpack Compose), Node.js, Express, REST APIs, MQTT, PostgreSQL (Supabase)

Tools: Git/GitHub, Android Studio, Unity, CI/CD basics | **Fundamentals:** Data Structures & Algorithms, OOP, System Design

EDUCATION

B.Sc. (Hons.) Computer Science, University of Delhi — CGPA 7.72 *2023 – 2027*

Class XII (CBSE, PCM), N.K. Bagrodia Public School — 89.2% *2023*

ACHIEVEMENTS

- Open-source contributor to **Mozilla Firefox** and **Bentley iTwin**; Guest Speaker at **AWE Nite Orlando** (international XR conference).
